

VPN

Ideal for businesses like:
 Logistic networks, Financial institutions, Manufacturing companies, Software technology companies and more

Experience security and redundancy
on a private network
 that senses your need for
optimum connectivity

THINK AHEAD SOLUTIONS

For Small and Medium Enterprises

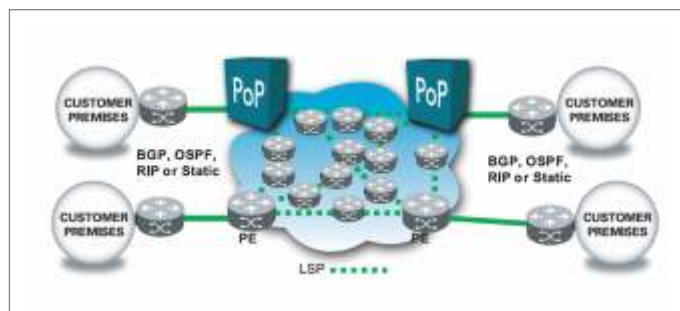

When your business is eager to boost its overall level of productivity and gain that competitive edge, we offer the advantage of Layer 3 VPN service, delivered on our fully-meshed, private MPLS network. This helps provide carrier-grade connectivity with high uptimes, application level prioritization, and exceptional security. We also ensure an end-to-end Quality of Service (QoS) along with a hassle-free WAN operation. In addition, you can keep your businesses on-track and in contact with a globally-based MPLS network that stretches across Europe, America, Asia and over 120 cities in India.

Key Benefits

- Robust and secure infrastructure which gives uninterrupted connectivity
- Converged service-aware infrastructure with reduced downtime processes
- Carrier-class, legacy-free MPLS network that is privately owned
- End-to-end managed WAN service
- Seamless global reach in 66 countries, across four continents, including pan-India coverage
- Unified global MPLS core across Asia, Europe and North America
- Plug and Play architecture across the fully-meshed MPLS network
- Support for multiple VPN configurations, for and flexible reliable service solutions
- Bundled, managed router support options that deliver greater value
- Real-time monitoring and reporting from over 120 Indian cities and the world
- Billing flexibility on a hassle-free WAN operation

Key Features

- A secure private network on a privately owned MPLS core
- Multiple CoS to provide differentiated QoS for voice, video and data applications
- The ability to leverage our global reach for your growing business needs
