# OBSERVABILITY AND VISUALISATION

Observability is a key technique to measure the current state of applications hosted over cloud and network by analysing the data they produce. In Tata Communications Vayu Cloud, we place the utmost importance on observability.

Visualisation is the process of creating visual representations of data to help organisations better understand, analyse, and gain insights from their data to make informed decisions. In a cloud environment, visualisation tools allow organisations to create and view data visualisations in a web browser or through a cloud-based application.

Various reports offered by Tata Communications Vayu Cloud

Uptime report

Application performance monitoring

Billing period invoice

Utilisation report

SLA report

Key benefits of observation and visualisation in cloud environment

Simplifies decision-making by analysing data trends and patterns.

Real time data monitoring enables the creation of interactive dashboards that display multiple data visualisations on a single page.

Greater flexibility to access from any device with an internet connection.

Report downloads for deep dive analysis.
