

Transform roaming testing Accelerate launch readiness

Tata Communications' **Roaming Testing Automation Platform**

Simplifying your roaming testing lifecycle with a connected and intelligent platform that seamlessly orchestrates every stage of the roaming journey. From roaming onboarding and IREG readiness to test planning, execution, defect resolution, billing assurance, and launch sign-off, the platform provides the visibility and coordination needed to accelerate readiness and achieve faster commercial launches.

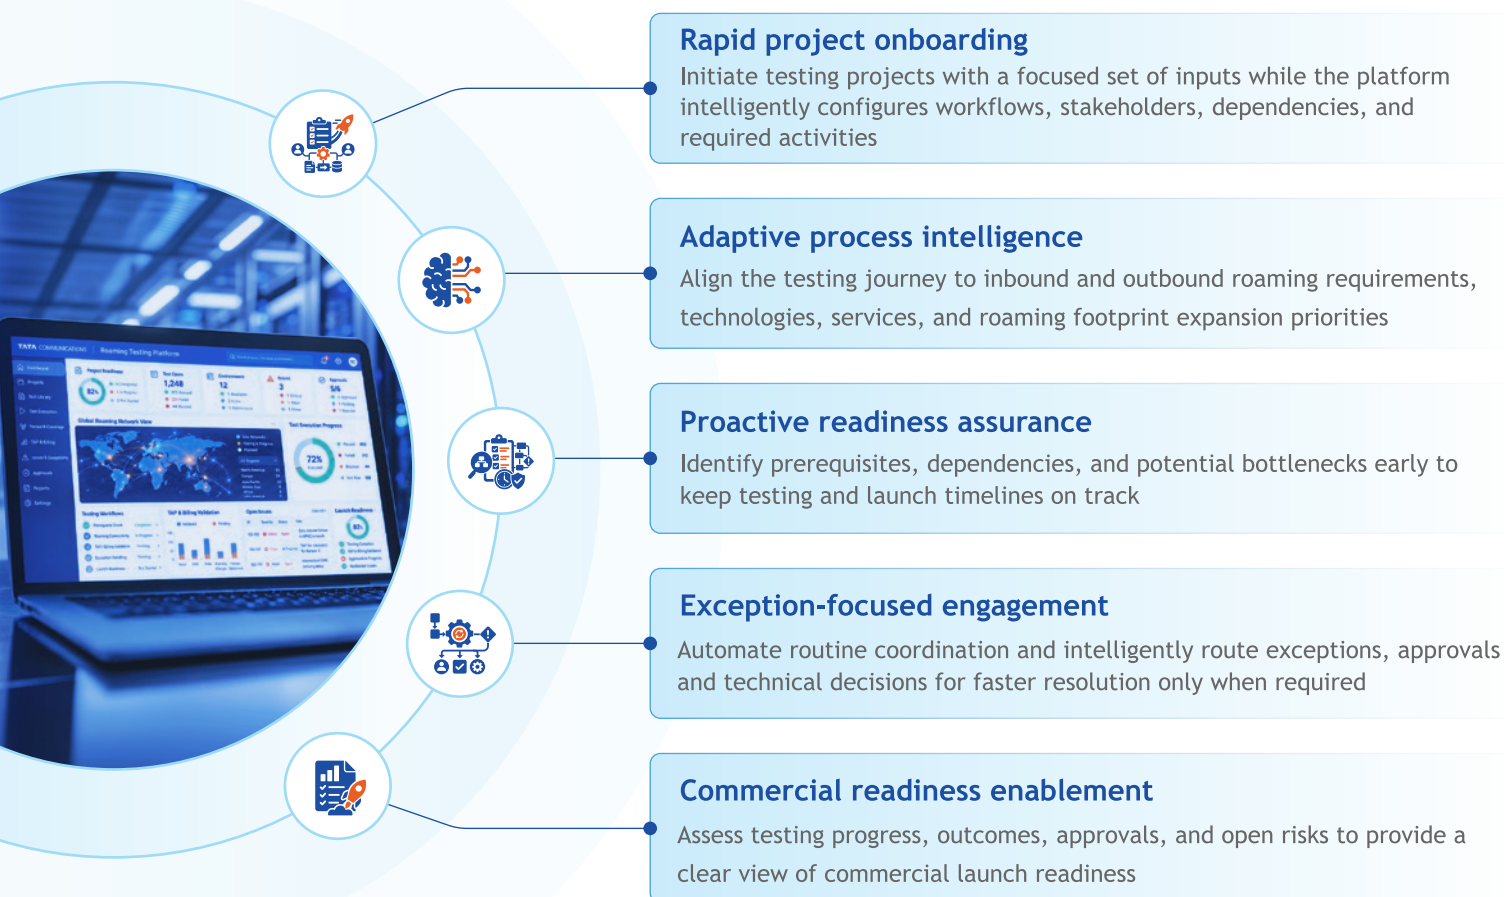

Think beyond fragmented **roaming testing journeys**

Roaming environments have become increasingly complex as operators manage multiple technologies, services, partners, and testing requirements. Today many roaming testing programmes continue to depend on fragmented emails, spreadsheets, standalone trackers, and repeated stakeholder follow-ups, resulting in inefficiencies, delays, and limited visibility across the testing lifecycle.

Tata Communications' Roaming Testing Automation Platform streamlines the entire testing lifecycle, providing end-to-end visibility, seamless collaboration, and structured governance to accelerate readiness and commercial launches.

Transform testing operations with Tata Communications' **Roaming Testing Automation Platform**

Seamless journey to launch readiness

A structured, end-to-end workflow that guides every stage of roaming testing from project initiation through to commercial launch approval.

Comprehensive roaming testing coverage

Support the full spectrum of roaming testing requirements across technologies, services and use cases. A platform built to support evolving technology upgrades, legacy network sunsets, service assurance, quality assurance, and technical and commercial readiness requirements across the roaming lifecycle.

Designed to deliver value across your organisation

Deliver measurable outcomes across teams through reduced manual effort, faster readiness, fewer delays, and improved billing assurance.

Tata Communications - A trusted partner

**Automation-led
roaming expertise**

Roaming expertise embedded into workflow and decision rules, with an extensible automation foundation connecting various stages of the roaming lifecycle

**AI-enabled
innovation**

Leveraging Tata Communications' growing AI capabilities to enhance efficiency, decision-making, and service outcomes

**Industry-leading
approach**

Structured, proven testing methodology designed to standardise readiness before commercial launch

Global reach

Presence across 700+ MNOs and MVNOs across 237+ global PoPs in 200+ countries

End-to-end value

Ability to bundle with roaming connectivity and value-added services
