

# IZO™+ Internet WAN

Comprehensive, right-fit Internet, simplified

## Internet services are not created equal

Enterprise network connectivity is evolving and driving Internet adoption. Customers with cost concerns may switch to Dedicated Internet Access (DIA) or broadband Internet, but both choices can silently impact your business.

### Dedicated Internet

- Dedicated leased-line access
- Typically offered with availability SLAs
- No performance guarantees on packet delivery, especially when traffic traverses multiple ISPs

### Broadband Internet

- Lower cost
- Contention ratio applies
- Best effort in both availability and packet delivery

## Complexity in managing multiple providers

- Coordinating with multiple Internet service providers across regions increases management complexity
- This complexity makes it challenging to maintain consistent service quality and standardised contract terms

IZO™+ Internet WAN is the most comprehensive Internet platform which offers the right-fit persona-based Internet services with a wide range of options including premium Internet, broadband, wireless and satellite, with flexible monitoring services to simplify your network management.

**Simple and agile management with cost efficiency**

Ease of management with global or regional contracts, a unified help desk and cloud-based monitoring for all network connections to reduce operational complexity and improve regional control and visibility.

**Global coverage with comprehensive access options**

Reach 230+ countries and territories worldwide through comprehensive access options including premium Internet, broadband, wireless, and satellite enabling resilience and diversity while reducing business disruption.

**Predictable performance with high dependability**

Run your enterprise WAN over the Internet with predictable routing, consistent performance, higher availability to improve user experience for applications on-premises and in the public clouds.

## Hybrid networking

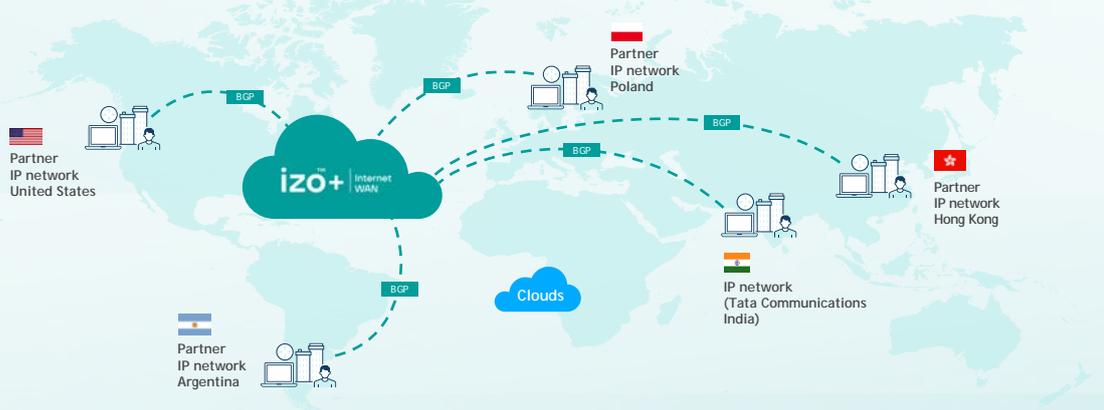

IZO™+ Internet WAN can be deployed as a hybrid network, seamlessly integrated with our MPLS-based Global VPN services. This is ideally suited for enterprises introducing cloud services into their existing IT and networking architecture, as well as for businesses looking to cost-effectively extend their global reach into new markets.

This hybrid WAN gives you access to over 230 countries and territories, with its capabilities enhanced further by Tata Communications' range of application-aware networking and managed security services.

“Tata Communications MPLS and IZO™+ Internet WAN is highly reliable and ensures stability. Adding to this is the exceptional service and support extended to us by its Customer Success Teams. Overall, I'm happy to say that Tata Communications has been a great partner to work with.”  
 -Ivan Moronta, *Global Telecommunications Manager, Archroma*

Global network management from Tata Communications frees us to concentrate on our core business, while improving our people's efficiency and effectiveness. In addition, high availability enhances the customer experience.”  
 -Øystein Eide, *Vice President, Head of Cloud Infrastructure, DNV AS*

### Predictable routing over the Internet through Tata Communications' global tier-1 network and regional partners

### Wide range of options to suit different site persona business needs

Parameter	GVPN	IZO™+ Internet WAN
