

MANAGED SECURITY SERVICES : GLOBAL SECURE INTERNET GATEWAY SERVICE

PREMIUM PROTECTION IN A SINGLE SERVICE

GAIN ALL-IN-ONE COVERAGE WITH A WORLD-CLASS, FULLY HOSTED SECURITY SERVICE

Benefit from a truly robust security architecture while lightening the workload. With Global Secure Internet Gateway Service (GSIGS) solutions, you can establish a multi-layered architecture that improves your security posture and reduces the total cost of ownership. As a hosted service in the cloud with a feature-rich UTM that includes firewall, IPS and web filtering, GSIGS gives you all-in-one coverage without the need to purchase, upgrade and manage in-house equipment

- Protect your organisation from downtime through early warning security intelligence from our MSS Customer Portal website
- Ensure continuity with 24x7 managed security for local networks and mission-critical assets
- Leverage integrated and managed intrusion prevention and network firewall capabilities to reduce the ability of attacks to traverse the network
- Ensure end user access control and policy compliance for access to networks

YOUR SECURITY, IN THE BEST HANDS

Managing security in-house is a resource-heavy affair. It takes expensive, highly trained staff to manage and maintain an equally expensive infrastructure. CPE demands power, space, license fees and maintenance, and if your organisation has local, decentralised firewalls, the workload for policy pushing is also high. No wonder organisations are increasingly looking to outsource their security requirements to a host they can trust.

Here's where Tata Communications has become the provider of choice.

The proactive approach for maximum protection

GSIG extends our managed UTM service as part of a full suite of managed security offerings that includes firewall, intrusion detection/prevention and URL filtering.

A firewall with a built-in advantage

With GSIGS, you gain a centralised, next-generation firewall infrastructure that can be logically partitioned into multiple virtual instances. Each instance serves as a distinct firewall, with policies unique to your organisation.

Comprehensive intelligence

Our expert team uses advanced systems for accelerated log aggregation, advance correlation and event prioritisation. Instead of the complexity and burden of manual data analysis, you gain better accuracy in identifying security events, escalating incidents and remediation.

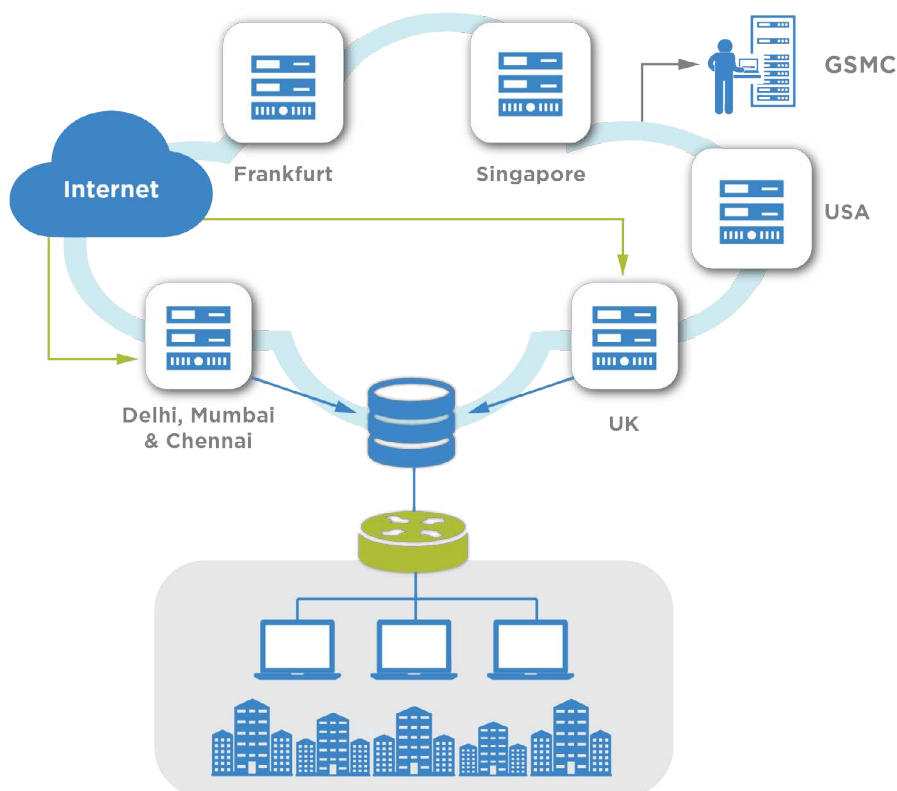

“Gain a fully hosted security appliance that’s expertly managed and monitored around the clock from our Global Services Management Centre.”

FEATURES INCLUDE:

- **Network-based coverage:** reduces costs by leveraging a shared security infrastructure, hosted within our IP backbone
- **Industry-leading SLAs:** benefit from money-back guarantees on the performance and responsiveness of our GSIGS
- **Subscription-based model:** so it's easy to subscribe and implement the service
- **Secure remote connectivity:** via an IPSec-based client and site-to-site VPN
- **Log management and analysis:** using industry-leading technology from Fortinet
- **Separate virtual instance per customer:** with flexible bandwidth options

BENEFITS

- **Reduce overheads** and free up internal staff
- **Ensure continuity** with 24x7 managed security
- **Minimise downtime** with early warnings
- **Prevent network breaches** by attacks and viruses
- **Gain flexibility** with a choice of service level

Global reach with 11 nodes- India (Mumbai, Delhi and Chennai), Singapore, the USA (New York and Los Angeles), the UK (London), Germany (Frankfurt), France (Paris), China (Hong Kong) and Australia (Sydney)
