

GLOBAL BUSINESS LEADERS ENVISION A POSITIVE IMPACT OF AI IN THE FUTURE OF WORK

AI WILL DIVERSIFY HUMAN THINKING

There is growing consensus that diversity of thinking on projects yields better outputs. Business executives believe that AI could help create and maintain working groups that optimise this cognitive diversity

90% of leaders surveyed believe that cognitive diversity is important

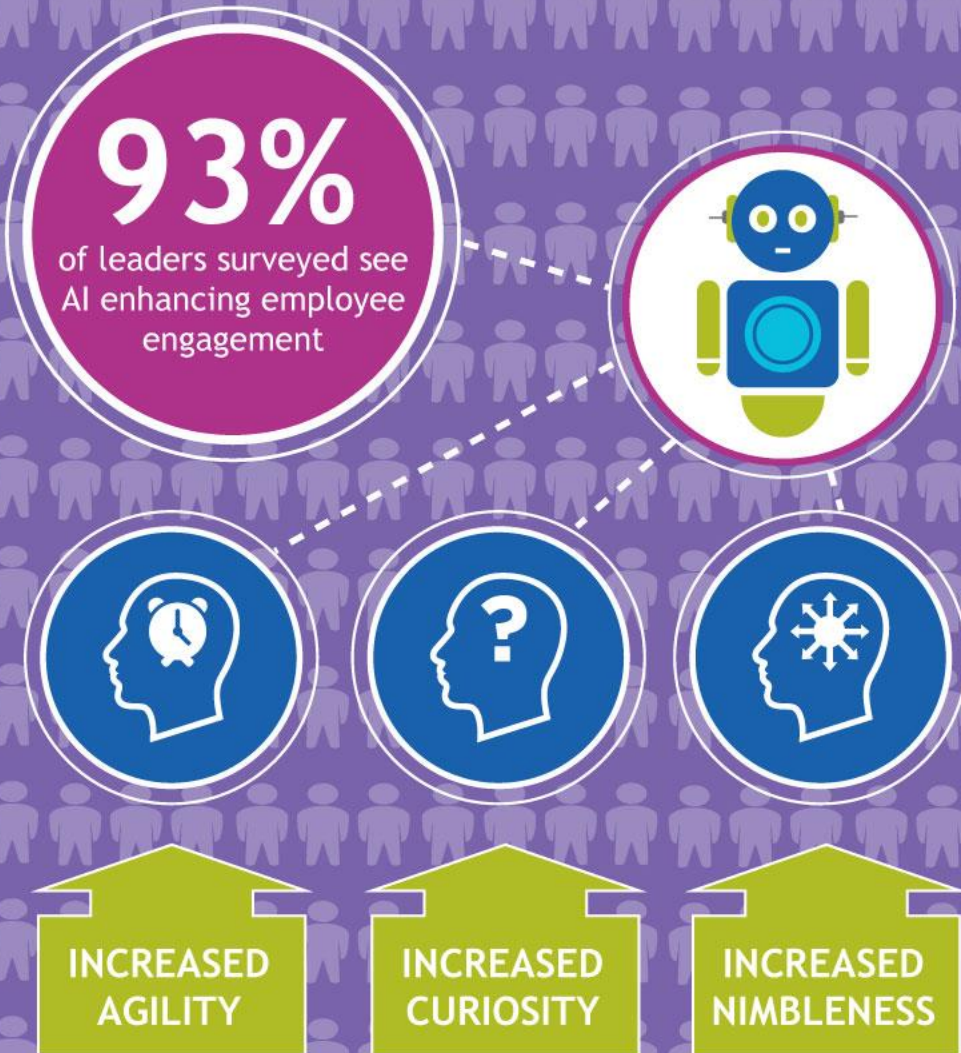

80%

of leaders surveyed agree that AI could facilitate team composition, organisation and communications, especially for global teams

AI CAN ENHANCE HUMAN COLLABORATION

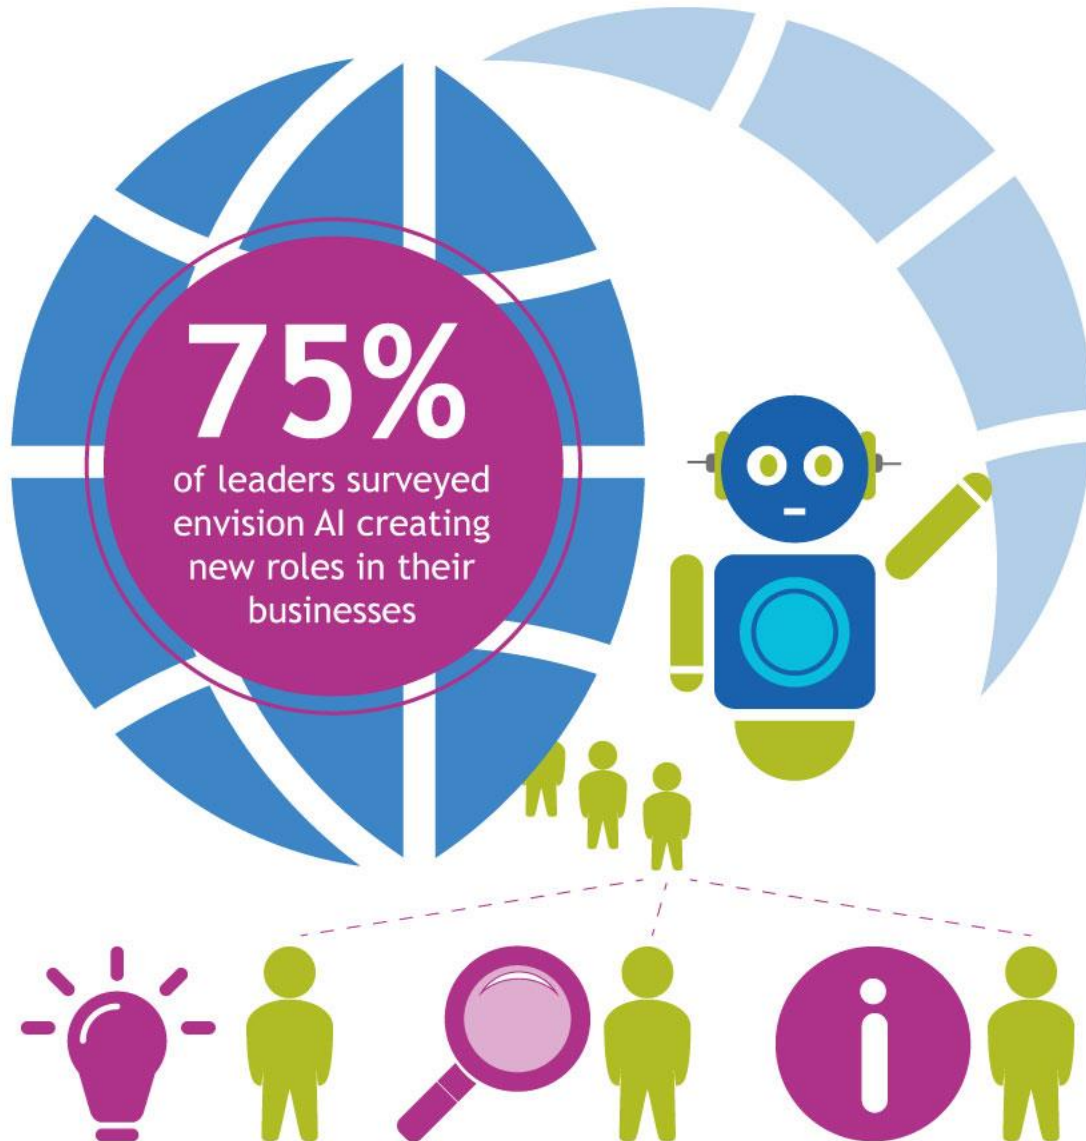

Business is increasingly multicultural, but a lack of understanding of languages and cultures can be a barrier to collaboration

AI CAN HELP WORKERS BECOME MORE AGILE, CURIOUS AND NIMBLE

AI has potential to assess each employee's skills and innovation priorities and suggest activities to spark creative thinking throughout the organisational hierarchy

This can democratise the creative process and increase engagement of all workers

THE STRUCTURE OF WORK WILL CHANGE & REQUIRE GREATER AGILITY & FLEXIBILITY

AI has potential to free employees from tedious repetitive tasks, allowing them to focus much more on communication and innovation

Work will move from being task-based to strategic, enabling workers to enhance their curiosity and creative thinking
