

# ARE YOU READY TO COMPLY WITH INDIA'S DATA PROTECTION FRAMEWORK?

Hot on the heels of global legislations like GDPR, India is going to introduce similar legislation necessitating data localisation and protection. As a multinational with operations in India, are you ready to meet these obligations?

## Why you need data localisation and protection

The wheels have been set in motion for India's first data protection bill based on the recommendations of the Srikrishna Committee report titled "A Free and Fair Digital Economy - Protecting Privacy, Empowering Indians". This legislation will imminently impact on your business's Indian operations.

### WHAT TO EXPECT

- Restrictions on processing and collection of personal data
- Data localisation and restricted data transfer
- Obtain explicit consent for processing personal data
- Regulate by setting up a Data Protection Authority
- Incorporate the right to be forgotten

## Get ready to localise your data storage

Any organisations with operations in India must align their processes and IT infrastructure to comply with the new data protection framework and relocate the relevant data storage to India.

### WHAT YOU MUST DO

- Understand local nuances for data storage and compliance
- Seamless data migration without impacting business
- Secure CAPEX and time required to build data storage facilities
- Build secure storage facilities with connectivity and disaster recovery

## Prepare for your journey with Tata Communications

**13+ Datacentres in India** (Delhi, Mumbai, Pune, Ahmedabad, Hyderabad, Bengaluru, Chennai, Kolkata)

**World's largest fibre network** for global communications and IT infrastructure
