MANAGED SECURITY SERVICES: CLOUD SECURITY INFORMATION AND EVENT MANAGEMENT (SIEM)

THE MANAGED APPROACH TO SECURITY MONITORING

THE INTELLIGENCE YOU NEED TO MONITOR CRITICAL ENTERPRISE DATA AND INCIDENT ALERTS

Tata Communications' cost-effective, proactive, fast and flexible Cloud SIEM enables compliance, security event detection and rapid incident response capabilities.

Monitor your critical enterprise data and alerts for incidents across all of your enterprise IT assets. This solution provides the intelligence you need at your fingertips – on actual and potential threats.

• You want to get value faster. Our OPEX-based, flexible pricing and 24/7/365 outsourcing model is designed to ensure you do

• Your data is safe. Our global network of data centres delivers ultra-robust storage and recovery, with ISO27001 certification as your guarantee

• Your security posture is enhanced. Thanks to improved compliance reporting and insights

• SIEM is easy to integrate with your existing security infrastructure and can be deployed as cloud- or premise-based

• Our experienced security analysts focus on real-time detection and response

SECURITY THREATS ARE EVER PRESENT

The security landscape doesn't stand still. There are threats coming from all angles. For today's enterprise, the key is to get to an integrated, centralised view that doesn't just protect network boundaries, but manages access rights and secures against all the end-point vulnerabilities that might compromise your business-critical data assets.

Not every organisation, however, has the kind of budget needed for their own Security Information and Event Management (SIEM) system – or the highly-skilled staff needed to implement and run it.

Our managed SIEM solutions give you centralised visibility and also leverage the value of your existing investments. Our solutions are designed to be affordable to the widest possible range of organisations.

We can offer a Security-as-a-Service model bundled with a centralised, cloud-based SIEM installation and on-site sensors, tailored specifically to the size and scope of your environment.
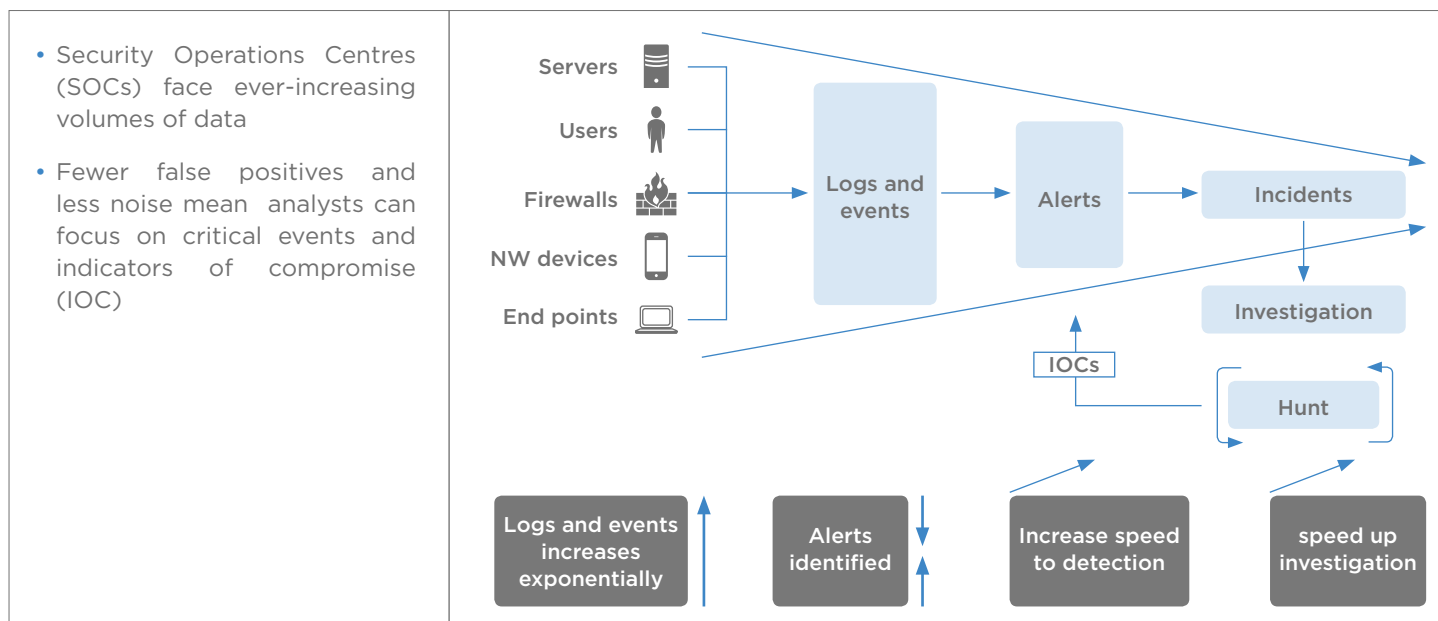

OUR SIEM SOLUTION DELIVERS

- **Client security portal :** With reporting, dashboard, ticketing, risk reports and more invaluable information.

- **Data enrichment :** User, asset and network information provide the situational and content awareness, enabling you to make informed decisions during your investigation.

- **Categorisation and normalisation of data** : We use CEF – the industry standard.

- **Multi-dimensional, real-time correlation** : This relates different events to each other and relates events to contextual data.

- **Ultrafast investigation and forensics** : Find that 'needle in the haystack' – our beautifully simple interface enables you to search multiple terabytes of active and historical data, ultra-fast.

- **Workflow automation** : Events of interest can be manually or automatically escalated to the right people using the right processes.

- **Best practices** : Industry best practices and high-level network access. Information availability. Integrity with privacy.

- **Experienced security analysts** : We support our global customers with a 'follow the sun' approach – so you can always rely on our help whenever you need it.

- **World-leading SIEM platform** : Our platform is enriched with threat intelligence and is integrated with vulnerability management.

TATA COMMUNICATIONS' CLOUD SIEM SOLUTION

Our cloud-based solution delivers a fully managed and SLA-driven service with event aggregation, correlation, threat identification, incident management, log management and compliance reporting features to give large organisations the benefit of a comprehensive SIEM system.

- Security Operations Centres (SOCs) face ever-increasing volumes of data

- Fewer false positives and less noise mean analysts can focus on critical events and indicators of compromise (IOC)
