Reduce Cost & Complexity with Tata Communications GSIP

Tata Communications can reduce complexity and cost by an average of 64% for large, global organizations running an extensive voice network.

We work together with Tariffmatch, a leading, independent telecom consultancy firm offering advanced analytic audits to large, multinational organisations who want to get a holistic view of their entire voice estate.

Each Tariffmatch audit will compile forensic data from your service providers in every country you operate, distilling and consolidating information down into consistent, like for like units of data to offer a comparable, holistic view of your entire estate, call activity and costs. Because of the advanced analytics and data science applied, audits frequently uncover evidence of fraud, abuse and billing errors.

Each Tariffmatch audit will:

- Identify OnNet calls between all offices across all suppliers

- Highlight maximum concurrent calls by day, to gauge capacity requirements

- List the most frequently dialled, expensive and longest calls

- Detail all destinations called with accurate savings generated

- Apply data science to highlight potential fraud and abuse

- Provide a summary of all savings made

We believe that our Global SIP solution will deliver significant cost savings and for this reason we're offering interested companies a no obligation, *free of charge* audit so that you can make the decision yourself[1].

[1] Audit shall be performed by Tarrifmatch under the terms and conditions set by Tarrifmatch. Tata Communications will under no circumstances have access to the results or the data used by Tarrifmatch for the audit Tata Communications is not responsible for the services provided by Tarrifmatch.
